Build and Configuration Instructions
G8

In order for Java programs to be executed, please ensure the Java Virtual Machine is currently installed on your computer. If not, please download it from Oracle.

1. Open the terminal (Mac/Unix) or the command prompt (Windows).
2. Navigate to the src folder of the folder the code is located in by executing the command:

```
cd <file path to folder>
```

3. Execute the command (assuming the Java Virtual Machine is in the default location on Windows):

```
set path=%path%;C:/Program Files/Java/jdk<version>/bin
```

4. To compile the file with the main method, execute the command:

```
javac <source file name>
```

5. To execute the compiled file, execute the command:

```
java <file name of compiled file>
```
